## **XB300** AIR CONDITIONER

*It's Hard To Stop A Trane.®*

### **Our smallest air conditioner is big on quality and performance.**

In the past, many dealers have used Trane as their mid-level and high-end systems, while recommending other brands for lower tier applications. That's no longer necessary. With the XB300, Trane not only fills the gap in our lineup, we do it with a superior product. The XB300 is a totally new product designed from the ground up to provide a Trane for every backyard.

### **Lighter and easier.**

For dealers, the smaller, lighter XB300 represents a new level of portability and ease of installation. Not only can the XB300 be easily transported in a van or pickup truck, installation is now a one-man job.

### **When selling to customers, here are some important highlights that can help you make the sale.**

- The XB300 is Trane designed and built to our exacting standards and delivers the quality and reliability you expect from Trane, at a competitive price.
- The XB300 is tested to the same standards as other Trane products. It has proven itself in the rigors of the SEET testing lab, and has endured over 3 million stress cycles. (Industry standards dictate testing to only 250,000 cycles.)
- For added durability, the Climatuff™ coil found in the XB300 is constructed entirely of aluminum to resist both weather-related corrosion and corrosion caused by copper and aluminum construction.
- The XB300 is built around the Climatuff® compressor, known throughout the industry for its reliability. It's the same compressor you'll find in our higher end models.
- The XB300 uses Manual Charge Assist™ to help ensure charging is quick, easy and accurate every time. So your customers get the performance they're expecting, summer after summer.
- A smaller refrigerant charge makes it not only more ecologically friendly, it also reduces system stress over time.
- The XB300 is built tough and backed well with a warranty worthy of a Trane. Coverage includes 10 years on the compressor, 10 years on the Climatuff™ coil and 5 years on all other parts with product registration.

## Inside the XB300.

- 1 One inlet and one outlet replace the network of pipes in a typical plate fin coil manifold.
- 2 Fewer brazed joints mean fewer places for a leak to develop.
- 3 A heavy duty coil guard protects against debris and physical damage.
- 4 Easy access to electrical components and the field-installed filter dryer.
- 5 Angled service valves for easier access.
- 6 Built around the same Climatuff® compressor found throughout the Trane family.

- 7 The all-aluminum Climatuff™ coil resists corrosion from the elements, and eliminates the corrosion caused by contact between copper and aluminum.
- 8 The outer wall edge thickness of the coil is maintained during bending, helping preserve the coil's strength and durability.

## Exclusive Manual Charge Assist.™

Because the XB300 uses a smaller refrigerant charge, proper system pressure is more crucial than ever. With Manual Charge Assist, we've simplified system charging. This patent pending design is a Trane exclusive, designed to make system charging quick and easy.

## Familiar technology. Proven reliability.

Adapted years ago for use in the automotive industry, the Advanced Heat Exchanger technology of the XB300's Climatuff™ coil has demonstrated itself to be durable, reliable and tough through many years and many millions of miles. Now imagine what it can do when it's safely nestled on the side of a house or behind an apartment complex.

## The XB300 is the ideal choice for markets you may not have considered.

### New Home Builders

New construction is a very cost-conscious market, and a less expensive solution can help builders stay competitive. The Trane XB300 saves construction costs without sacrificing quality. It also allows builders to offer budget-conscious customers the peace of mind that comes with a well-built system and a no-nonsense warranty.

### Multi-Family Property Managers

The Trane XB300 is ideal for multi-family dwellings because it's 40% smaller by volume than previous units, making it an easier fit in tight spaces. Since it's also lighter, it's much easier to swap out units, and store additional replacement units on site.
