The Carrier Performance™ Series Edge™ thermostats consists of programmable and non-programmable air conditioner, heat pump and Thermidistat™ controls. These units feature non-mercury, non-lead based electronic controls built into a subtle, slim plastic enclosure.

**FEATURES/BENEFITS**

**Edge Programmable & Non-Programmable**
- Outdoor Air Temperature (OAT) sensor option
- Auto changeover available
- Battery free
- Non-volatile memory to retain settings during a power outage
- Keypad lockout
- English/Metric units selection
- Filter/UV light/Humidifier pad replacement indicators
- Continuous display backlighting configurable
- Hybrid Heat compatible
- RC/RH power compatible
- 2-wire communicating installation option

**Edge Programmable models**
- ExP™ expansion port* for use with future enhancements and/or features
- Programmable with personal computer**
- 7, 5-2, All Days programmable
- 4 or 2 periods per day programmability
- Programmable fan by period
- Vacation mode controls temperature and humidity
- Remote room sensor option
- Adjusts automatically for Daylight Savings Time

**Edge Non-Programmable models**
- Touch-It-Go™ programmability

**Air Conditioner Control**
- 1-stage heat / 1-stage cool

**Heat Pump Control**
- 3-stage heat / 2-stage cool

**Thermidistat Control**
- Heat pump 2-stage or Hybrid Heat 3-stage heat / 2-stage cooling with humidity control
- Humidity display
- Humidify output for direct control of humidifier
- Dehumidify output for variable-speed blowers
- Hybrid Heat compatible

* ExP accessory (expansion port and memory card) sold separately
** Requires ExP accessory

#### DIMENSIONS

**Fig. 3 - Performance Series Programmable Thermostat**

**Fig. 4 - Performance Series Non-programmable Thermostat**

#### PRODUCT DATA INFORMATION

**Physical Characteristics**
- **Dimensions:** See drawing
- **Mounting:** Vertical or horizontal J-box provisions

**Electrical**
- Input volts/amps: 24VAC, 3 VA, RC/RH compatible

**Environment**
- Operating temperature/Relative humidity: 32°F (0°C) to 104°F (40°C), 95% RH non-condensing
- Storage temperature/Relative humidity: -40°F (-40°C) to 134°F (57°C), 95% RH non-condensing

#### Wiring Requirements
- Standard 18 to 22 gauge, local wiring codes supersede

#### Accessories

* The outdoor air temperature sensor must be used with the Thermidistat control in a Hybrid Heat system.
Heating/Cooling Setpoints
The heating/cooling setpoint range is from 50°F (10°C) to 90°F (32°C). A selectable range of 1-6°F is enforced between heating and cooling desired temperatures. This is done by allowing one setting to “push” the other, to maintain this difference. (This difference is adjustable in Installer settings.)

Humidify/Dehumidify Setpoint Range
The humidify setpoint range is from 10% to 46% RH in 2% RH increments. The dehumidify setpoint range is from 46% to 66% RH in 2% RH increments.

Five-minute Compressor Time Guard
This timer prevents the compressor from starting unless it has been off for at least 5 minutes. It can be defeated for 1 cycle by simultaneously pressing the FAN button and INCREASE TEMPERATURE (UP) button.

Equipment on indicators
When cooling equipment is ON, a COOL ON icon is displayed. When heating equipment is ON, a HEAT ON icon is displayed. When auxiliary heating is ON (HP only), an AUX HEAT icon is displayed.

Humidify/Dehumidify Output On Indicators
(Thermidistat Control)
When the operating mode is heat and the HUM output is energized the “humidify” icon shall be displayed. When the operating mode is cool, the dry contact is configured as a DEHUM output and there is a dehumidify demand or the cooling equipment is energized to satisfy a dehumidify demand, the “dehumidify” icon shall be displayed.

Auto Changeover
When Auto Changeover mode is selected, a change from heat to cool (or vice versa) will not occur until an opposite mode demand has existed for 20 minutes. When a setpoint is changed, Auto Changeover timing is ignored to allow the heating/cooling equipment to respond quickly. Auto Changeover mode can be disabled.

Emergency Heat Mode
When the thermostat is controlling a heat pump and emergency heat is selected, all Y signals are locked out, and W becomes energized upon a call for heat.

Smart Recovery (Programmable models)
With Smart Recovery selected, transition out of setback begins a fixed time period (Off, 30, 60, or 90 minutes selectable) before selected recovery time and gradually adjusts room temperature so that the desired temperature will be achieved at selected recovery time.

Room Temperature Offset
Room temperature may be deliberately offset by up to 5° in either direction.

Programmable Fan (Programmable models)
This selection allows the homeowner to program the fan selection to “Auto” or “Fan On” for each of the program schedule periods.
